JPG and PDF are widely used file formats online, but sometimes you need to convert between them. Hundreds of online JPG to PDF converters exist, and it is even possible to convert from JPG to PDF using tools included in both Windows and Mac. Most online PDF converters only allow you to convert one image at a time. This can make converting hundreds or thousands of JPGs a laborious task. The best jpg to PDF converters have batch conversion, so you can combine multiple JPGs into one PDF or create multiple PDFs from a JPGs folder. Another useful feature is OCR (optical character recognition). An OCR converter can scan your JPGs for the text you can edit in the converted PDF file. In this article, save to outline our favorite JPG in pdf conversion software options. We have presented the best free PDF editors and the best OCR software. Nitro Pro costs \$159 per user, including unlimited eSignatures. Special prices for equipment from more than 20 users are available upon request. A 14-day trial can be downloaded from the website. In general, Nitro Pro is an excellent conversion tool, but PDF editing tools do not have the finesse of Soda PDF and Wondershare PDF Element. Also see: the best AutoCAD to PDF converter. By Shawn M. JPEG, or Joint Photographic Experts Group format, has become a standard because it is a compressed file format for digital images. By compression of large photos, JPEGs allow you to adapt to more images on a digital camera memory card or hard drive. They also move over the internet relatively quickly. The Only One are called digital noise. This makes it difficult to print large photographs and produces images below the professional standard. You can convert photos to top-level standards. Use a high-end program like Adobe Photoshop on Apple's Macintosh to convert files into a variety of formats. While some other programs allow you to convert files, Photoshop is the industry standard and gives you more control over conversion. Open Photoshop on your Mac, then open the JPEG file you want to convert. Go to Custom > Image. Set the final resolution to 200 points per inch or 300 dpi if it is a JPEG image from a digital camera. They are usually set to 72 dpi, but the width and height are very large, usually in the range of 30 or 40 inches. When you set the dpi to 200 or 300, change the width to the maximum you need to print. This could be 8.5 inches, 11 inches or larger. This will prepare the image for conversion. Blow the image up big so you can see the pixels. The jpeg noise will appear as red, green and blue pixels where they should not be. If you don't see any of this, you're ready to convert it. If there is noise, go to Filter > Noise and try the tools found there, such as Median, Dust & Scratches or Remove Noise. First try deleting noise, but others may work best with certain images. Go to File > Save As. A pop-up menu will appear. In the center below the file list window, there is a bar that allows you to choose image file formats. Click it and select Photoshop EPS. Save the new image as the encapsulated PostScript file. A common question I've received a lot these days is how to convert a PDF file to Microsoft Word format (doc), Excel format (xls) or JPG image format. Normally, people want to know how to convert a file to PDF, but it's also nice to be able to convert it back to the other way. There are several ways to get your PDF file in any of these three formats, but I will stay with the easiest methods that require the least amount of software. You can do almost all conversions online these days using free tools. Convert PDF to JPG - Go to Online Tools ZamZar.com and click the Choose Files button to get started. Go ahead and select your pdf file and then click OK. Now, under step 2, go ahead and choose the file type you want to convert the PDF file to. By default, the box will determine the file type you have chosen and give you the list of possible types of output files. You can convert a PDF file, for example, to a doc or docx file, to a bmp, jpg, gif or png file, etc. In our case, we will choose JPG from the list. Now type your email address and click the Convert button. That's it! You should get an email a few minutes with a to the converted file. People have complained about significant time delays between clicking Convert and actually getting an email. It seems the site is quite busy and if you try to convert to a very busy time, it can take a few hours or even a day or two to get yours file. If this is unacceptable, they have paid monthly plans, but unless you need to convert PDF files all the time, it is not worth buying. If you're having problems with Zamzar, you can try another free online PDF in jpg converter: The end result of both sites was very good, but again, there's not much that needs to be done to convert from a PDF to an image. It gets trickier when you have to go from PDF to Word or excel format. Convert PDF to JPG - Desktop Software The first thing you will need to do is download free software (all you could find) that converts PDF documents into JPEG image format automatically. Go to the Omniformat download page and download both Omniformat v8.3 and pdf995 application. You must first download and install PDF995 before installing Omniformat. Once you have both programs installed, go to your Start Menu programs, find the Software995 program group and click Omniformat. The only annoying thing about this program is that it requires seeing some ads for about 30 seconds! However, it's better than paying \$20 or \$40 for a program just to make a simple conversion! Another instance appears in your browser window for the website of each of the sponsors, but does not install any spyware on your computer (no pop-up ads). Once the program loads, you'll see it has a section called Watch Folders and then a button at the bottom titled Start Monitoring and Simple Step. Basically the way it works is you need to copy the PDF files you want to convert to JPG format in the C:\omniformat\watch folder and then press Simple Step. The program will look at this directory and convert each page of each PDF into a separate JPG file. If you click Start Monitoring, you can continue dropping pdfs into this folder, and the program will automatically convert them to JPEGs whenever the program is open. Note that the program REMOVES the original PDF document you use, so you need to copy the PDF document to the surveillance folder, do not move it! Now you should see your converted files as below: Another desktop program you can use is Free PDF to JPG, which also allows you to convert a PDF to BMP, PNG and TIFF format. Convert PDF to Word Again, Zamzar does a great job of this conversion. Choose the file, and then select DOC or DOCX from the options list in step 2. Type your email address for step 3, and then click Convert. You should receive an email in a few minutes with a download link to the converted file. I have tried this service in some quite complex pdf documents with text in multiple columns, multiple images, etc. and have been very impressed with their conversion accuracy. Again, there are other ways to get your PDF in Word format. Here there are some free online tools from Nice: if you want a desktop program to convert PDF to Word, you can one here: CONVERT PDF to Excel, it's the same process that Zamzar uses, which is great as long as they're not busy. Previously, you had to convert the PDF file to a TXT file, and then import it into Excel and save it as an XLS or XLSX file. Now, however, it has been updated and Zamzar is fully compatible with Excel format, so you can choose it directly in step 2. Apart from Zamzar, the other popular option is the Nitro PDF software, which is also the same company behind pdftoword.com mentioned above: If you have a very complicated PDF file and the format is not being converted correctly using these free tools, you may need to invest in a commercial software package that can possibly do a better job. For example, there is Adobe Acrobat Pro DC, which allows you to convert PDF files to Word, Excel, and even Powerpoint files. Of course, it's pretty expensive (\$15 a month) and probably only worth it if your IT department foots the ticket. Bill.
